

Pre-eminent manufacturer of electric light bulbs in the country. Today the journey continues with Transtec LED lighting solutions transforming residential, commercial & industrial spaces in Bangladesh with modern technology.

CHALLENGE

- Multiple legacy system usage which increases the daily workload of user.
- Loss of historical data as there was no data preservation in system.
- There was no existing practice of maintaining manufacturing process through ERP.
- No real time data extraction was possible from system.

SOLUTION

- Setting up BOM of all finished products and by shop order creating component material requirement and issuing material based on FEFO in system.
- Setting up Re-Order Point, Safety Stock and Lot Size by which system automatically generates purchase requisition in system which ensures materials availability in stock.
- Quality control of all manufactured items in the system.

Actual product costing of a Lot/batch from system based on labor class

RESULT

- Single IFS solution which covers up the whole legacy system.
- Increased the efficiency, better visibility and quality control of each manufacturing process.
- Streamlined process with less manual work, better control over inventory and quality control.
- More systematic workflows to analyze historical data of customer which leads to take necessary measures to achieve better customer satisfaction
